

# Bellwork: 6&9Sep

*congruent*

1. What do the tick markings mean as in:

2. Classify the following triangles:

Equilateral  
*Acute*

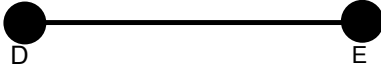

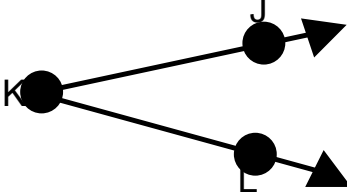

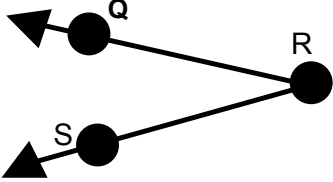

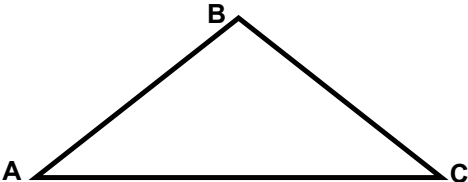

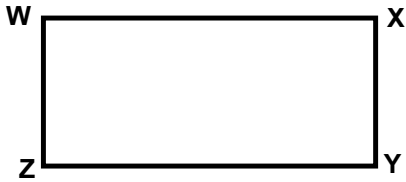

Scalene  
Right

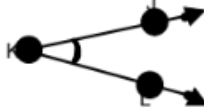

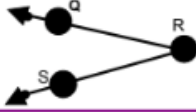

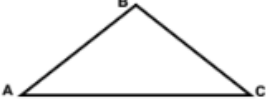

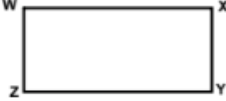

ISOSCELES  
Right

ISOSCELES  
*OBTUSE*

Vocabulary	Drawing	Notation
Line:		$\overleftrightarrow{BC}$
Line segment:		$\overline{DE}$
Ray:		$\overrightarrow{FG}$
Angle: 		$\angle JKL$ $\angle K$ $\angle LKJ$
Measure of Angle:		$m\angle QRS$ $m\angle SRQ$ $m\angle R$
Triangle:		$\triangle ABC$
Quadrilateral:		$\square WXYZ$

1-4  
~~7-4~~ Properties of Triangles

I can find missing angle measures in a triangle.

I can solve problems using properties of triangles (isosceles, midsegments, angle sum).

## The Triangle Sum Theorem

$$m\angle A + m\angle B + m\angle C = 180$$

The Triangle Sum Theorem:  
The sum of the measures of the interior angles of a triangle is  $180^\circ$ .

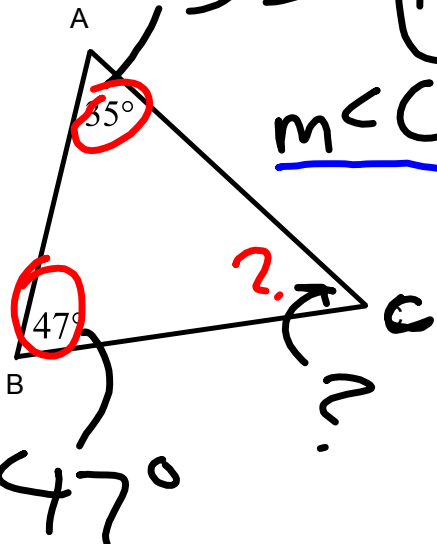

Find the missing angle measures:

$$47 + 35 = 82$$

$$35^\circ$$

$$180 - 82 = 98$$

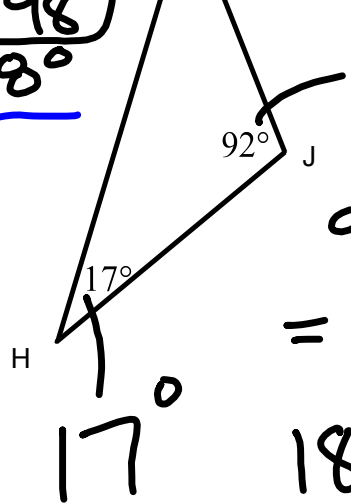

$$m\angle C = 98^\circ$$

$$47^\circ$$

I ?

$$m\angle I = 71^\circ$$

$$92^\circ$$

$$92 + 17 = 109$$

$$180 - 109 = 71$$

Find the value of  $x$ . Justify your answer (in words).

$$55 + 80 = 135$$

$$180 - (\checkmark) = 45$$

$$60 + 80 = 140$$

$$180 - 140 = 40$$

Find the measure of angle A. Explain your reasoning (in words).

$$180 = m\angle A + m\angle B + m\angle C$$

$$180 = \underbrace{x+68}_{\angle A} + \underbrace{58+x}_{\angle B} + \underbrace{70}_{\angle C}$$

$$180 = 196 + 2x$$

$$-196 - 196$$

$$-16 = 2x \quad x = -8$$

$$m\angle A = x + 68 = 60^\circ$$

## Equilateral Triangle:

All angles in the triangle are congruent.

All sides in the triangle are congruent.

## Isosceles Triangle:

At least 2 sides (called the *legs*) of the triangles are congruent.

Base Angles

Find the measure of all angles in triangle ABC if angle B is  $80^\circ$ .

What is a midsegment?

What is a midsegment?

What is a midsegment?

Point B is the midpoint

Midsegment - a segment that connects the midpoint of 2 sides of a triangle.

It is  $\parallel$  to the third side of the triangle and half as long.

Ex:

$$\frac{8}{2} = \frac{2x}{2}$$

$$x = 4$$

Solve for  $x$  and justify your answer (with words).
